Design Process Phases & Formatting Guide

This notebook is color-coded by the phase of the engineering design process. The table of contents and the header of each entry will reflect these phases.

Define Problem: Identifying the core issue, setting SMART goals, outlining constraints and deliverables.

Generate Concepts: Brainstorming, research, prototyping, and decision matrices to evaluate potential solutions.

Develop Solution: Creating CAD, detailed sketches, math calculations, graphical models, and pseudocode.

Construct and Test: Building the robot, writing the code, executing test plans, and gathering qualitative/quantitative data.

Evaluate Solution: Reflecting on constraints, event outcomes, and planning future improvements.

General Formatting

- Keep entries in chronological order.
- Ensure all figures have captions.
- Provide detailed explanations for calculations, code logic, and design choices.
